## ABOUT COMPANY

Uberture LLC is one of the leading Russian manufacturers of interior doors and decorative MDF profile products for interior decoration.

The technical equipment of the enterprises, including equipped warehouses and access railway tracks, makes it possible to fulfill customer orders in a short time. A large warehouse program allows you to avoid interruptions in delivery.

Many years of experience in the market and high-tech German equipment have allowed Uberture>> to achieve the highest level of product quality, which has been repeatedly awarded with many awards at Russian and international exhibition forums.

Uberture creates a new generation product that combines style, quality and affordability. The products are included in the list of "100 best goods of Russia".

Today, after 27 years, the Uberture>> company continues to develop. The status of a pioneer, won in 1995, is maintained continuously. This is embodied in the new design features of the drawers, and in the development of new collections of doors and wall panels, and in the use of new facing materials. Therefore, the history of "Uberture" is not a finished article, it is an open book into which more and more new events continuously fit in.

## PARMA

The PARMA collection is a modern look at - the design of a classic interior door. Classic geometry combined with a trendy color palette opens up many options for interior solutions. Curly panels give the doors a special charm. Stained glass models are made with straight bars, emphasizing the classic style, and also perform a stabilizing function that allows you to maintain the geometry of the canvases even with prolonged and increased operational load.

## UNILINE

An elegant sequence of alternating wood- effect surfaces and glass lines creates an exquisite play of light and shadow. Reflection of interior details in the glass doors give a zest to the rooms of modern European or Scandinavian styles, which are characterized by light, thin and elegant details of structures made of multi-layered wood, stones and glass.

Pearl Oak

## VERSAILLES

Due to the absence of a rich volumetric decor, the silhouette of the door leaf looks very elegant and sophisticated. The elongated shape of the diamonds on the glass adds elegance and visually lengthens the door.

Versailles doors will organically fit into luxurious interiors, endowing, like works of art, the space with a unique charm and aristocratic respectability.

## RIMINI

A distinctive feature of the RIMINI collection is a voluminous baguette and extraordinary glazing. The textured frame acts as a frame element to improve the fixation of the panel and the glazed insert, which gives the shape of the doors a special sculpture and a peculiar playfulness. The falling light on the stained glass decorative drops creates an exquisite brilliance and charm in addition to all the decorative details of the frame.

## SALUTTO

The doors of the Salutto collection are designed to become an architectural decoration of the interior. The number of decorative elements is reduced to a minimum so that nothing distracts attention from the expressive plasticity of the design, built on the play of volumes and planes, emphasized by the depth of saturated color.

## MADRID

Modern discreet door with classic touches is one of the most beautiful collections. At the base is tempered glass, which gives airiness to the door leafs, and "floating" panels only enhance the effect. Tempered glass perfectly transmits the silhouette and is 5-6 times stronger than conventional glass. With a very strong impact, tempered glass breaks, and crumbs form with non-sharp edges that cannot be cut, which makes it safe for household use.

## PERFECTO

The PERFECTO collection is a kind of rethinking of the neoclassical style. A futuristic solution for your interior: the originality of beveled lines and shapes, combined with velvet decor, will make the doors the main accent in the room. The main difference of the collection is a rich decorative baguette and a beveled figure panel, which gives the door leafs an additional architectural volume,

## TAMBURAT

Clear geometric lines and strict restrained design of the TAMBURAT collection are harmonious in plain and contrasting rooms. Noble matte shades of the door panels will visually expand the space of the room, the metal frame of the door leaf and moldings additionally emphasize the style of the model and fill it with movement.

A nice addition would be the ability to keep a single plane of the door with the wall thanks to the complonar casing. Complanarity is a special aesthetic of minimalism, when the canvas and the wall are in the same plane.
